[A History of Scientific Journals](#) Feb 08 2021 Modern scientific research has changed so much since Isaac Newton's day: it is more professional, collaborative and international, with more complicated equipment and a more diverse community of researchers. Yet the use of scientific journals to report, share and store results is a thread that runs through the history of science from Newton's day to ours. Scientific journals are now central to academic research and careers. Their editorial and peer-review processes act as a check on new claims and findings, and researchers build their careers on the list of journal articles they have published. The journal that reported Newton's optical experiments still exists. First published in 1665, and now fully digital, the Philosophical Transactions has carried papers by Charles Darwin, Dorothy Hodgkin and Stephen Hawking. It is now one of eleven journals published by the Royal Society of London. Unrivalled insights from the Royal Society's comprehensive archives have enabled the authors to investigate more than 350 years of scientific journal publishing. The editorial management, business practices and financial difficulties of the Philosophical Transactions and its sibling Proceedings reveal the meaning and purpose of journals in a changing scientific community. At a time when we are surrounded by calls to reform the academic publishing system, it has never been more urgent that we understand its history.

**Journal of Archaeology in the Low Countries, Volume 2 Number 1** Aug 05 2020 The Journal of Archaeology in the Low Countries offers the opportunity to the archaeological community to present its research to a wider, international audience. It will cover the full archaeological time scale, from the earliest Palaeolithic up till investigations of subrecent times, like those of shipwrecks and fortifications. With the 'Low Countries' of the title both The Netherlands, Belgium and adjacent areas are meant, or - in geographical terms - the Lower Rhine Basin. The Journal is open to all contributions on research within or of relevance for this region. The main focus of the journal is our understanding of former societies, their differentiation and changes through time, and their relation to the natural environment, not only within the narrow limits of the main area of interest, but essentially in relation to wider patterns and developments. The Journal welcomes contributions ranging from theoretical reflections, broad overviews and analyses to the presentation of data and (recent) discoveries, which are of more than local interest. The Journal distinguishes main articles of 5000-10.000 words and short contributions of 1000-2500 words. The Journal of Archaeology in the Low Countries is basically published as an e-journal, but also available in the Printing on Demand option.

[The Philippine Journal of Science](#) Jul 28 2022 A memorial number was issued with v.7.

**Accounting Journals: Scopus, Web of Science, SCImago** Mar 24 2022 This book is a full guidebook among more than 218 accounting international journals with an evaluation of 3,000 publications for over the last two years. It aims to help readers for selecting an appropriate journal for publishing own research in the international arena or to find the required topic for conducting further investigating or to be informed about so large-scale science as accounting. Here a reader will find detailed information about accounting journals in terms of Scopus, Web of Science and SCImago databases. In addition, there are highlighted accounting journals in terms of IFRS and blockchain concentration in accounting researches nowadays. The relevant aims and scope of each journal are also presented. Anyway, this book is an indispensable assistant for students while getting the “Accounting” specialization, as well as teachers and scientists while conducting empirical researches in the practice and theory of the accounting field.

The Scientific Journal Oct 31 2022 Not since the printing press has a media object been as celebrated for its role in the advancement of knowledge as the scientific journal. From open communication to peer review, the scientific journal has long been central both to the identity of academic scientists and to the public legitimacy of scientific knowledge. But that was not always the case. At the dawn of the nineteenth century, academies and societies dominated elite study of the natural world. Journals were a relatively marginal feature of this world, and sometimes even an object of outright suspicion. The Scientific Journal tells the story of how that changed. Alex Csiszar takes readers deep into nineteenth-century London and Paris, where savants struggled to reshape scientific life in the light of rapidly changing political mores and the growing importance of the press in public life. The scientific journal did not arise as a natural solution to the problem of communicating scientific discoveries. Rather, as Csiszar shows, its dominance was a hard-won compromise born of political exigencies, shifting epistemic values, intellectual property debates, and the demands of commerce. Many of the tensions and problems that plague scholarly publishing today are rooted in these tangled beginnings. As we seek to make sense of our own moment of intense experimentation in publishing platforms, peer review, and information curation, Csiszar argues powerfully that a better understanding of the journal’s past will be crucial to imagining future forms for the expression and organization of knowledge.
