The Color Atlas of Human Poisoning and Envenoming is the only full-color resource available for the immediate visual

association and the rapid identification of envenoming species, resultant lesions, clinical outcomes of envenoming or poisoning, and recommended treatment strategies to limit toxic exposures and injuries. With no-nonsense, bulleted text, tables, figure legends, and diagrams, this atlas provides an immediate reference for use in emergency differential diagnosis. Incidence of venous diseases is becoming more and more frequent. An increasing number of people suffer from varicose veins, chronic venous stasis and, as a result, venous ulcers. Therefore, it is becoming more important for physicians and surgeons to make an accurate and early diagnosis of weaknesses in the vein wall, and to effect and monitor the care plan. A Colour Atlas of Venous Diseases serves the needs of a wide range of professionals by reinforcing diagnostic skills and suggesting effective management tools. Through an array of colour photographs, x-rays, drawings, and practical text, the book covers the basic anatomy, the different types of varices, the clinical stages of chronic venous stasis, and inflammatory venous changes. Clinical photographs, X-rays, MRI, ultrasound, and CT pictures provide an in-depth view of the clinical features of orthopedic diseases and deformities. This atlas is an invaluable help in differential diagnosis for orthopedic surgeons and residents alike. In the 6th edition of this Colour Atlas of Ophthalmology, all the chapters have been comprehensively updated to incorporate the latest advances in the understanding, diagnosis, investigations and treatment of ocular diseases. This edition has new chapters on glaucoma, trauma, global blindness with major revisions of chapters particularly cornea, cataract and retina. Photographs and images have been updated to reflect the progress in imaging

systems and new diagnostic modalities. The electronic version of this book also includes short videos of common surgeries in ophthalmology. With more than 300 high quality pictures and concise text, this book will be an excellent reference for medical students, general practitioners, optometrists, paramedical personnel and community ophthalmic assistants to help understand and treat common eye diseases. Colour Atlas of Ophthalmology, Second Edition provides information pertinent to the fundamental aspects of ophthalmology. This book provides the correct diagnosis and treatment of many ocular disorders. Organized into 11 chapters, this edition begins with an overview of the process of assessment of a patient with eye disease, which includes taking a good history, examining the eyes with adequate illumination, and testing the visual function. This text then describes exophthalmos, which is the most common condition of the orbit and indicates the possibility of thyroid disease or a space-occupying lesion. Other chapters consider the common causes of ocular injuries, including injury from flying particles, sharp instruments, chemicals, and ocular injury associated with head injury. The final chapter deals with the common, therapeutic, and diagnostic ocular drugs. This book is a valuable resource for ophthalmologists, physicians, nurses, students, and all those paramedical personnel who have to deal with common eye disease. Salmonids have widespread economic and environmental importance. Correct identification and understanding of their diseases are therefore vital if valuable stocks are to be maintained. This volume provides a practical guide and an aid to disease recognition. This is an updated and extended version of the first publication

in 1996 and contains around 400 high quality colour photomicrographs. This atlas describes and illustrates in detail the surgical procedures employed in laparoscopic anatomical liver

resection, according to tumor location. The surgical approach and techniques are explained for each type of laparoscopic liver resection based on the involved anatomical segment, section, and hemi-liver. Attention is also drawn to potential complications and the means of preventing and managing them. Beyond anatomical liver resection, guidance is provided on non-anatomical resections that do not pay regard to segmental, sectional, or lobar anatomy. The coverage is completed by the inclusion of useful information on instruments and energy devices as well as the basic skills required for laparoscopic liver resection. In presenting a clear practical approach to each laparoscopic anatomical major and minor resection, the Color Atlas of Laparoscopic Liver Resection will be an invaluable guide for trainees. In addition, it will equip more experienced surgeons with much useful information that will enable them to further improve their technique. Color Atlas of Equine Pathology offers a practical guide to identifying equine diseases, presenting a single resource with more than 1000 images showing predominantly gross pathology. Organized by body systems, the book allows for picture matching during or after an equine necropsy. In this user-friendly atlas, each chapter takes a common format, presenting the disease process as well as congenital, degenerative, inflammatory, and neoplastic sequences, with text boxes offering quick reference to key information. The book begins with an introductory chapter summarizing the principles of the equine field necropsy, and subsequent organ-based chapters depict gross features of disease, focusing on macroscopic digital images supplemented by histology and immunohistochemistry when necessary. Some clinical

information for correlation with pathology is included. Color Atlas of Equine Pathology is an essential resource for diagnostic veterinary pathologists and pathology residents, as well as for equine practitioners performing necropsies in the field.
