*Speaking Out on Human Rights* Jan 07 2021 Canadians like to see themselves as champions of human rights in the international community. Closer to home, however, the human rights system in Canada - particularly its public institutions such as commissions and tribunals - has been the object of sustained debate and vehement criticism, based largely on widespread myths about how it works. In *Speaking Out on Human Rights*, Pearl Eliadis explodes these myths, analysing the pervasive distortions and errors on which they depend. Canada's human rights system, a unique legal tradition operating within a powerful modern constitution, is a fundamental mechanism for ensuring the practical application of our national commitment to tolerance and inclusion. Drawing on in-depth interviews with Canada's leading human rights experts and extensive original research, Eliadis explores the evolution of commissions and tribunals as vehicles of public policy and considers their mandate to mediate rights conflicts in such contested areas as hate speech, religious freedoms, and sexuality. She provides a frank assessment of how Canada's human rights system functions and argues that misplaced critiques have prevented urgent and necessary discussions about the reforms that are needed to improve fairness and equality before the law and to ensure institutional independence, impartiality, and competence. *Speaking Out on Human Rights* shows how our human rights system plays a unique and important role in the rights revolution both in Canada and internationally and offers promising avenues for its future development.

*Handbook of Research on Human Development in the Digital Age* Apr 10 2021 The rapid evolution of technology continuously changes the way people interact, work, and learn. By examining these advances, researchers can further optimize the various opportunities that technology provides. The *Handbook of Research on Human Development in the Digital Age* is a pivotal reference source presenting the latest scholarly research on the impact of technology on the population through different theories and perspectives. Featuring extensive coverage on a broad range of topics such as cyberbullying, mobile technology, and social skills development, this publication is ideally designed for academicians, researchers, and practitioners seeking current research on new trends in technology that impact society.

*Human-Centered AI* Sep 22 2019 The remarkable progress in algorithms for machine and deep learning have opened the doors to new opportunities, and some dark possibilities. However, a bright future awaits those who build on their working methods by including HCAI strategies of design and testing. As many technology companies and thought leaders have argued, the goal is not to replace people, but to empower them by making design choices that give humans control over

technology. In *Human-Centered AI*, Professor Ben Shneiderman offers an optimistic realist's guide to how artificial intelligence can be used to augment and enhance humans' lives. This project bridges the gap between ethical considerations and practical realities to offer a road map for successful, reliable systems. Digital cameras, communications services, and navigation apps are just the beginning. Shneiderman shows how future applications will support health and wellness, improve education, accelerate business, and connect people in reliable, safe, and trustworthy ways that respect human values, rights, justice, and dignity. [Perspectives on Human Suffering](#) Jun 24 2022 This volume brings together a range of interdisciplinary perspectives on a topic of central importance, but which has otherwise tended to be approached from within just one or another disciplinary framework. Most of the essays contained here incorporate some degree of interdisciplinarity in their own approach, but the volume nevertheless divides into three main sections: Philosophical considerations; Humanities approaches; Legal, medical, and therapeutic contexts. The volume includes essays by philosophers, medical practitioners and researchers, historians, lawyers, literary, Classical, and Judaic scholars. The essays are united by a common concern with the question of the human character of suffering, and the demands that suffering, and the recognition of suffering, make upon us.

[On Human Finery](#) Sep 03 2020 Looks at why people wear the clothes that they do and what makes fashion change. The book is a personal view of fashion over the centuries, confounding established theories, and interspersed with anecdote. Other work by the author includes *The Schools of Design* and *Victorian Artists*.

*I Am Human* Oct 24 2019 I am human I am a work in progress Striving to be the best version of ME From the picture book dream team behind *I Am Yoga* and *I Am Peace* comes the third book in their wellness series: *I Am Human*. A hopeful meditation on all the great (and challenging) parts of being human, *I Am Human* shows that it's okay to make mistakes while also emphasizing the power of good choices by offering a kind word or smile or by saying "I'm sorry." At its heart, this picture book is a celebration of empathy and compassion that lifts up the flawed fullness of humanity and encourages children to see themselves as part of one big imperfect family—millions strong.

[Perspectives on Human Development, Family, and Culture](#) Oct 16 2021 Çiğdem Kağitçibaşı has long been at the forefront of research in developmental and cultural psychology, and is one of the world's most highly respected cross-cultural psychologists. This collection of essays has been produced in honor of Professor Kağitçibaşı's retirement and to commemorate her contribution to the field. The volume examines social, developmental, and cultural psychology and intervention policies. A select group of international expert scholars explore those aspects of human behavior that are observed in all cultures, as well as those that are unique to each. They also examine changes in the family across socio-cultural contexts and generations in order to understand the factors precipitating these changes. Representing developments in theory and research in the field, this volume that will appeal to researchers and students of developmental and cross-cultural psychology across the world.

**The European Convention on Human Rights** Jul 01 2020 The *European Convention on Human Rights: A Commentary* is the first complete article-by-article commentary on the ECHR and its Protocols in English. This book provides an entry point for every part of the Convention: the substance of the rights, the workings of the Court, and the enforcement of its judgments. A separate chapter is devoted to each distinct provision or article of the Convention as well as to Protocols 1, 4, 6, 7, 12, 13, and 16, which have not been incorporated in the Convention itself and remain applicable to present law. Each chapter contains: a short introduction placing the provision within the context of international human rights law more generally; a review of the drafting history or preparatory work of the provision; a discussion of the interpretation of the text and the legal issues, with references to the case law of the European Court of Human Rights and the European

Commission on Human Rights; and a selective bibliography on the provision. Through a thorough review of the ECHR this commentary is both exhaustive and concise. It is an accessible resource that is ideal for lawyers, students, journalists, and others with an interest in the world's most successful human rights regime.

Figure it Out! Growing Up Human Aug 26 2022 In *Growing Up Human*, bioarchaeologist Brenna Hassett brings the science of physical anthropology to bear on understanding how our evolutionary history has shaped a phenomenon every reader will have experienced - childhood. The development of a foetus is an extraordinary biological process by itself, but the story of how we grow up began long before any of us were even born. Paleoanthropological science has revealed that deep in our hominid lineage we began to diverge from other primates by giving birth to fatter, more helpless infants and developed one of humanity's most striking adaptations - the evolution of childhood; a long period of dependence and social learning that makes us the animals we are today. Beginning with how the differences between humans and our primate cousins lead to our difficult births, it moves through the science of how our unlikely babies have spurred social and cultural adaptations, right up to things like the invention of 'teenagers' less than a century ago. We learn how anthropologists can interpret the physical evidence of the experience of childhood, including the very real risks that children faced in the past, and what archaeological remains tell us about how our societies have treated children over the ages. This is the first book to cover both the evolution of human children as biological phenomena and the cultural impact visible in the archaeological record for a popular readership. It explains why you should expect what you expect when you're expecting by examining every aspect of human development, from the evolution of our large-headed, helpless, high-fat babies right through to the social importance of childhood and adolescence, how this has changed over the millennia, and how we can interpret the story of childhood through the ages using teeth, skulls and bones.

**Human Proportions for Artists** Mar 21 2022 "Human Proportions for Artists" discusses human proportions and includes profuse illustrations and tables of about 120 representative human measurements of both male and female figures in inch and metric dimensions for comparison from heroic size to 1/12 life size with 10 sizes in between. This 192 page abridged version for print-on-demand is slightly fewer pages than the first edition (which is still available in spiral bound at \$38, as well as hard cover at \$58). This book is of particular interest to students and serious amateurs. **What Does it Mean to be Human?** Jul 13 2021 This generously illustrated book tells the story of the human family, showing how our species' physical traits and behaviors evolved over millions of years as our ancestors adapted to dramatic environmental changes. In *What Does It Mean to Be Human?* Rick Potts, director of the Smithsonian's Human Origins Program, and Chris Sloan, National Geographic's paleoanthropology expert, delve into our distant past to explain when, why, and how we acquired the unique biological and cultural qualities that govern our most fundamental connections and interactions with other people and with the natural world. Drawing on the latest research, they conclude that we are the last survivors of a once-diverse family tree, and that our evolution was shaped by one of the most unstable eras in Earth's environmental history. The book presents a wealth of attractive new material especially developed for the Hall's displays, from life-like reconstructions of our ancestors sculpted by the acclaimed John Gurche to photographs from National Geographic and Smithsonian archives, along with informative graphics and illustrations. In coordination with the exhibit opening, the PBS program NOVA will present a related three-part television series, and the museum will launch a website expected to draw 40 million visitors.

**Reflections on Human Nature** Apr 29 2020 He discusses the theory of human nature held by the founders of the American Constitution, giving special attention to James Madison and the "Federalist Papers."

Migration, Gender and Social Justice Nov 24 2019 This book is the product of a collaborative effort involving partners from Africa, Asia, Europe and Latin America who were funded by the International

Development Research Centre Programme on Women and Migration (2006-2011). The International Institute of Social Studies at Erasmus University Rotterdam spearheaded a project intended to distill and refine the research findings, connecting them to broader literatures and interdisciplinary themes. The book examines commonalities and differences in the operation of various structures of power (gender, class, race/ethnicity, generation) and their interactions within the institutional domains of intra-national and especially inter-national migration that produce context-specific forms of social injustice. Additional contributions have been included so as to cover issues of legal liminality and how the social construction of not only femininity but also masculinity affects all migrants and all women. The resulting set of 19 detailed, interconnected case studies makes a valuable contribution to reorienting our perceptions and values in the discussions and decision-making concerning migration, and to raising awareness of key issues in migrants' rights. All chapters were anonymously peer-reviewed. This book resulted from a series of projects funded by the International Development Research Centre (IDRC), Canada.

What is a Human? Apr 22 2022 Scholars claim that if the public has particular definitions of a human they will treat others like objects or animals. This work examines these claims and finds that some definitions do lead to maltreatment, but the definitions of a majority of the public are unlikely to do so.

**The Laws of Human Nature** Dec 26 2019 WINNER OF THE INTERNATIONAL BUSINESS BOOK AWARD 2019 From the million-copy bestselling author of *The 48 Laws of Power* Robert Greene is a master guide for millions of readers, distilling ancient wisdom and philosophy into essential texts for seekers of power, understanding and mastery. Now he turns to the most important subject of all - understanding people's drives and motivations, even when they are unconscious of them themselves. We are social animals. Our very lives depend on our relationships with people. Knowing why people do what they do is the most important tool we can possess, without which our other talents can only take us so far. Drawing from the ideas and examples of Pericles, Queen Elizabeth I, Martin Luther King Jr, and many others, Greene teaches us how to detach ourselves from our own emotions and master self-control, how to develop the empathy that leads to insight, how to look behind people's masks, and how to resist conformity to develop your singular sense of purpose. Whether at work, in relationships, or in shaping the world around you, *The Laws of Human Nature* offers brilliant tactics for success, self-improvement, and self-defence.

*Gallucci's Commentary on Dürer's 'Four Books on Human Proportion'*

Nov 29 2022 In 1591, Giovanni Paolo Gallucci published his *Della simmetria dei corpi humani*, an Italian translation of Albrecht Dürer's *Four Books on Human Proportion*. While Dürer's treatise had been translated earlier in the sixteenth-century into French and Latin, it was Gallucci's Italian translation that endured in popularity as the most cited version of the text in later Baroque treatises, covering topics that were seen as central to arts education, connoisseurship, patronage, and the wider appreciation of the studia humanitatis in general. The text centres on the relationships between beauty and proportion, macrocosm and microcosm: relationships that were not only essential to the visual arts in the early modern era, but that cut across a range of disciplines - music, physiognomics and humoral readings, astronomy, astrology and cosmology, theology and philosophy, even mnemonics and poetry. In his version of the text, Gallucci expanded the educational potential of the treatise by adding a Preface, a Life of Dürer, and a Fifth Book providing a philosophical framework within which to interpret Dürer's previous sections. This translation is the first to make these original contributions by Gallucci accessible to an English-speaking audience. Gallucci's contributions illuminate the significance of symmetry and proportion in the contemporary education of the early modern era, informing our understanding of the intellectual history of this period, and the development of art theory and criticism. This is a valuable resource to early modern scholars and students alike, especially those specialising in history of art, philosophy, history of science, and poetry. Perspectives on Human-animal Communication Jun 12 2021 This book

represents early and prominent forays into the subject of human-animal communication from a Communication Studies perspectives, an effort that brings a discipline too long defined by that fallacy of division, human or nonhuman, into conversation with animal studies, biosemiotics, and environmental communication, as well as other recent intellectual and activist movements for reconceptualizing relationships and interactions in the biosphere.

*Conversations on Human Nature* Feb 20 2022 Recent empirical and philosophical research into the evolutionary history of Homo sapiens, the origins of the mind/brain, and the development of human culture has sparked heated debates about what it means to be human and how knowledge about humans from the sciences and humanities should be understood. *Conversations on Human Nature*, featuring 20 interviews with leading scholars in biology, psychology, anthropology, philosophy, and theology, brings these debates to life for teachers, students, and general readers. The book-outlines the basic scientific, philosophical and theological issues involved in understanding human nature;-organizes material from the various disciplines under four broad headings: (1) evolution, brains and human nature; (2) biocultural human nature; (3) persons, minds and human nature, (4) religion, theology and human nature; -concludes with Fuentes and Visala's discussion of what researchers into human nature agree on, what they disagree on, and what we need to learn to resolve those differences.

**Impacts of Climate Change on Human Health** May 23 2022

Climate change poses a serious challenge to our health and wellbeing. The increasing frequency of extreme weather events such as floods, droughts, and heatwaves, and the direct impacts of changes in temperature have direct impacts on health. At the same time, broader environmental change affects infectious disease risk, air pollution, and other forms of exposure. The different ways in which climate change will affect health are complex, interactive, and different communities are disproportionately affected. International actions such as the Paris Agreement and the Sustainable Development Goals recognise the future risks to society and acknowledge that we are already committed to a certain level of climate change. Future adaptation measures therefore need careful assessment and implementation for us to be able to minimise the potential risks from climate change and, at the same time, maximise the potential health benefits of a cleaner, greener world. This Special Issue comprises original research articles and detailed reviews on the likely impacts of climate change on health in a range of geographical settings, and the potential for adaptation measures to reduce some of these risks. Ultimately, studies like these will motivate policy level action for mitigation and help in determining the most effective methods of adaptation to reduce negative impacts in future through embedding scientific evidence into practice.

**On Human Conflict** Aug 14 2021 *On Human Conflict* excavates the philosophical foundations of war and peace in order to determine whether wars can ever be ended. It ranges over relevant mathematical models, Hobbes's natural philosophy, theories of causality, biological and cultural evolution, general systems theory, Buddhism, globalization, and futurology.

**Global Responsibilities** Mar 29 2020 In *Global Responsibilities*, some of the world's leading theorists of ethics, politics, international relations, and economics-including Nobel Prize winner Amartya Sen and philosopher Peter Singer-ask and answer the question: Who must deliver on human rights?

\_\_\_\_\_ We all have ten types of human in our head. They're the people we become when we face life's most difficult decisions. We want to believe there are things we would always do - or things we never would. But how can we be sure? What are our limits? Do we have limits? *The Ten Types of Human* is a pioneering examination of human nature. It looks at the best and worst that human beings are capable of, and asks why. It explores the frontiers of the human experience, uncovering the forces that shape our thoughts and actions in extreme situations. From courtrooms to civil wars, from Columbus to child soldiers, Dexter Dias takes us on a globe-spanning journey in search of answers, touching on the lives of some truly exceptional people. Combining cutting-edge neuroscience, social psychology and human rights research, *The Ten Types of Human* is a provocative map to our hidden selves. *Radically Human* Oct 28 2022 Technology advances are making tech more . . . human. This changes everything you thought you knew about innovation and strategy. In their groundbreaking book, *Human + Machine*, Accenture technology leaders Paul R. Daugherty and H. James Wilson showed how leading organizations use the power of human-machine collaboration to transform their processes and their bottom lines. Now, as new AI powered technologies like the metaverse, natural language processing, and digital twins begin to rapidly impact both life and work, those companies and other pioneers across industries are tipping the balance even more strikingly toward the human side with

technology-led strategy that is reshaping the very nature of innovation. In *Radically Human*, Daugherty and Wilson show this profound shift, fast-forwarded by the pandemic, toward more human—and more humane—technology. Artificial intelligence is becoming less artificial and more intelligent. Instead of data-hungry approaches to AI, innovators are pursuing data-efficient approaches that enable machines to learn as humans do. Instead of replacing workers with machines, they're unleashing human expertise to create human-centered AI. In place of lumbering legacy IT systems, they're building cloud-first IT architectures able to continuously adapt to a world of billions of connected devices. And they're pursuing strategies that will take their place alongside classic, winning business formulas like disruptive innovation. These against-the-grain approaches to the basic building blocks of business—Intelligence, Data, Expertise, Architecture, and Strategy (IDEAS)—are transforming competition. Industrial giants and startups alike are drawing on this radically human IDEAS framework to create new business models, optimize post-pandemic approaches to work and talent, rebuild trust with their stakeholders, and show the way toward a sustainable future. With compelling insights and fresh examples from a variety of industries, *Radically Human* will forever change the way you think about, practice, and win with innovation.

*Between Ape and Human* May 31 2020 A remarkable investigation into the hominoids of Flores Island, their place on the evolutionary spectrum—and whether or not they still survive. While doing fieldwork on the remote Indonesian island of Flores, anthropologist Gregory Forth came across people talking about half-ape-like, half-human-like creatures that once lived in a cave on the slopes of a nearby volcano. Over the years he continued to record what locals had to say about these mystery hominoids while searching for ways to explain them as imaginary symbols of the wild or other cultural representations. Then along came the 'hobbit'. In 2003, several skeletons of a small-statured early human species alongside stone tools and animal remains were excavated in a cave in western Flores. Named *Homo floresiensis*, this ancient hominin was initially believed to have lived until as recently as 12,000 years ago—possibly overlapping with the appearance of *Homo sapiens* on Flores. In view of this timing and the striking resemblance of *floresiensis* to the mystery creatures described by the islanders, Forth began to think about the creatures as possibly reflecting a real species, either now extinct but retained in 'cultural memory' or even still surviving. He began to investigate reports from the Lio region of the island where locals described 'ape-men' as still living. Dozens claimed to have even seen them. In *Between Ape and Human*, we follow Forth on the trail of this mystery hominoid, and the space they occupy in islanders' culture as both natural creatures and as supernatural beings. In a narrative filled with adventure, Lio culture and language, zoology and natural history, Forth comes to a startling and controversial conclusion. Unique, important, and thought-provoking, this book will appeal to anyone interested in human evolution, the survival of species (including our own) and how humans might relate to 'not-quite-human' animals. *Between Ape and Human* is essential reading for all those interested in cryptozoology, and it is the only firsthand investigation by a leading anthropologist into the possible survival of a primitive species of human into recent times—and its coexistence with modern humans.

*Companion Animals in Human Health* Feb 08 2021 Exactly how do animals affect the quality of life of their human companions? The 7th International Conference on Animals, Health, and Quality of Life set out to explore this question. A major result of this quest was *Companion Animals in Human Health*, a careful selection of jurored and invited papers from that conference. The articles in this volume address Human Animal Interaction (HAI) according to the elements that define quality of life: physical, mental, emotional, and social health; functional health; and general well-being. Beginning with an overview of human/animal interaction from historical and value perspectives, the authors develop a conceptual framework for HAI research and quality of life measurement. They then go on to explore the psychosocial and physiological impact of HAI. The concluding sections address the role of companion animals in human development and the training and welfare of animals in therapeutic programs. As a state-of-the-science document, *Companion Animals in Human Health* is a must-read for all health and social science professionals caring for clients who already have companion animals or for clients who might benefit from such interaction. Thus it will be of interest to those in the fields of clinical psychology, cognition, developmental psychology, family studies, gerontology, nursing, patient care, psychology, public health, and sociology.

*On Human Nature* Jan 19 2022 In this book, Jonathan H. Turner

combines sociology, evolutionary biology, cladistic analysis from biology, and comparative neuroanatomy to examine human nature as inherited from common ancestors shared by humans and present-day great apes. Selection pressures altered this inherited legacy for the ancestors of humans—termed hominins for being bipedal—and forced greater organization than extant great apes when the hominins moved into open-country terrestrial habitats. The effects of these selection pressures increased hominin ancestors' emotional capacities through greater social and group orientation. This shift, in turn, enabled further selection for a larger brain, articulated speech, and culture along the human line. Turner elaborates human nature as a series of overlapping complexes that are the outcome of the inherited legacy of great apes being fed through the transforming effects of a larger brain, speech, and culture. These complexes, he shows, can be understood as the cognitive complex, the psychological complex, the emotions complex, the interaction complex, and the community complex.

*Becoming Human* May 11 2021 In this deeply compassionate work, Jean Vanier shares his profoundly human vision for creating a common good that radically changes our communities, our relationships and ourselves. He proposes that by opening ourselves to others, those we perceive as weak, different, or inferior, we can achieve true personal and societal freedom. The 10th anniversary edition includes a new Introduction by the author.

*The Dawn of Everything* Aug 22 2019 INSTANT NEW YORK TIMES BESTSELLER A dramatically new understanding of human history, challenging our most fundamental assumptions about social evolution—from the development of agriculture and cities to the origins of the state, democracy, and inequality—and revealing new possibilities for human emancipation. For generations, our remote ancestors have been cast as primitive and childlike—either free and equal innocents, or thuggish and warlike. Civilization, we are told, could be achieved only by sacrificing those original freedoms or, alternatively, by taming our baser instincts. David Graeber and David Wengrow show how such theories first emerged in the eighteenth century as a conservative reaction to powerful critiques of European society posed by Indigenous observers and intellectuals. Revisiting this encounter has startling implications for how we make sense of human history today, including the origins of farming, property, cities, democracy, slavery, and civilization itself. Drawing on pathbreaking research in archaeology and anthropology, the authors show how history becomes a far more interesting place once we learn to throw off our conceptual shackles and perceive what's really there. If humans did not spend 95 percent of their evolutionary past in tiny bands of hunter-gatherers, what were they doing all that time? If agriculture, and cities, did not mean a plunge into hierarchy and domination, then what kinds of social and economic organization did they lead to? The answers are often unexpected, and suggest that the course of human history may be less set in stone, and more full of playful, hopeful possibilities, than we tend to assume. *The Dawn of Everything* fundamentally transforms our understanding of the human past and

offers a path toward imagining new forms of freedom, new ways of organizing society. This is a monumental book of formidable intellectual range, animated by curiosity, moral vision, and a faith in the power of direct action. Includes Black-and-White Illustrations
