Number Fields Oct 19 2021 Requiring no more than a basic knowledge of abstract algebra, this text presents the mathematics of number fields in a straightforward, pedestrian manner. It therefore avoids local methods and presents proofs in a way that highlights the important parts of the arguments. Readers are assumed to be able to fill in the details, which in many places are left as exercises.

Tables of the Function Arc Sin Z May 26 2022

1963 Supplement to Screw-thread Standards for Federal Services 1957 (parts I, II and III).
Dec 29 2019

NASA technical note Dec 09 2020

Algebraic Shift Register Sequences Sep 17 2021 Describes the design, mathematical analysis and implementation of pseudo-random sequences for applications in communications, cryptography and simulations.

Encyclopedia of Television Shows, 1925 Through 2007: Sk-Z Jun 26 2022 "This work represents decades of research and television's entire history. While documentation regarding cast and personnel is now often found online, descriptions of the shows from authoritative sources are still not widely available. Terrace fills that gap with this work, which covers more than 9,350 shows and constitutes the most comprehensive documentation of TV series ever published"--Provided by publisher.

Scientific Directory and Annual Bibliography Aug 05 2020 Presents the broad outline of NIH organizational structure, the professional staff, and their scientific and technical publications covering work done at NIH.

Elsevier's Dictionary of Geography Apr 12 2021 Geography is a system of highly developed sciences about the environment. Geographical science embracing the study of the Earth's physical phenomena, people and their economic activities has always been in need of an extensive terminology. Geographical terms are related to the terms of natural sciences (physics, chemistry, biology, geology, etc.) and humanities (history, economics, sociology, etc.) since geography is based on these fundamental subjects. Geography includes a number of disciplines and subdivisions which appeared along with the development of the science. In spite of being very different geographical disciplines have some common tools of investigation which is maps, comparative method of exploration, remote sensing, geoinformation systems. Today very well developed terminologies of all the specialist fields of geography and related subjects exist in the main world languages. However, they are not always well-correlated. Nowadays geographical terminology requires unification and international correlation more than ever before. Hence the idea of compiling a multilingual polydisciplinary dictionary. The Dictionary consists of the basic table of terms arranged according to the order of the English alphabet with each term numbered. Each entry consists of the term in English and its equivalents in Russian, French, German, Spanish. Short definitions of terms are given in English and in Russian. The terms are supplied with the necessary grammar labels, such as gender of nouns, plural number, etc. The Dictionary combines two functions: that of a defining dictionary and that of a bilingual dictionary.

These two functions are basically contradictory because usually the defining dictionary is aimed at giving one meaning of the word which is the main and essential one, while the bilingual dictionary tries to give different equivalents of a given word in the other language in order to supply the user with maximum possible translations, differing in the shades of meanings, thus giving him the possibility to choose the appropriate word. But in our Dictionary we intentionally decided to combine the two functions – defining and multilingual, because a short definition of the term and equivalents in other languages help to achieve our main aim which consists in showing the basic geographical terminology and harmonizing it in several languages. Having this into consideration we deliberately mixed two types of dictionaries in one. Organized alphabetically via English Provides short definition of geographical terms in English and Russian Includes multilingual translation of terms from English to Russian, French, German, Spanish
