The Code of Federal Regulations Title 26 contains the codified Federal laws and regulations that are in effect as of the date of the publication pertaining to Federal taxes and the Internal Revenue Service. In recent years the

peasant household has become a central focal point of social history. This is true not only because the peasant represents the major element of European society through the nineteenth century, but also because many of the main issues in modern historical debate can be studied within the sphere of the peasant family. This book deals with the European peasant family during the period of transformation from agrarian to industrial society, the time called by some the period of protoindustrialization. The essays in this volume explore some of the major issues concerning the influence of the economy, society and institutions on the peasant household and, conversely, the influence of the peasant household on the outside world. Themes dealt with include the ways in which the physical environment and the economy may make for very different family structures and even affect intra-family relationships; the effects of inheritance, marriage and kinship strategies, as

well as social pressure, on peasant family structure and demography; the debate about changing gender roles and status; the debate over the manner and effects of class formation; questions of social and political agency; the nature of gender and parent-child relations; the validity of protoindustrial theory; and the role of peasants in initiating industrialization as consumers, producers and as a labor force. In examining these themes, the essays provide both case studies and innovative analysis by preeminent international scholars in the fields of family and women's history, economic history and demography. Prasna Marga is a unique work on astrology, natal and horary, of vital importance to every astrological scholar, practitioner and student. The author, a Nambudari Brahmin of Kerala who wrote this book in 1650 A.D., was a renowned scholar and has culled valuable information from a number of ancient sources. This ancient work, an English translation of which is presented here is simple and elegant English interspersed with copious notes incorporating the author's own experiences, touches on some of the most important aspects

of life marriage, children, longevity, death, disease, etc. Part 1 is an exhaustive treatise on the various aspects of predictive astrology of immense practical utility, which deals not only with the various aspects of Prasna or Horary Astrology but also with almost the entire range of the forecasting art-Jataka or predictive astrology, Muhurta or electional astrology, Parihara or remedial astrology and Nimittas or the science of indications (Omens). Part II is an encyclopaedic work on matters that affect all areas of human life, such as marriage, children, causes of diseases as given in karma vipaka and the remedies, matters relating to deities, rulers, war, natural calamities, travel, rainfall, digging wells, details for finding underground water, theft cases, dreams and their interpretation as indicators for the death of disease and its timings, etc. This book offers a thorough reanalysis of Charles Darwin's Origin of Species, which for many people represents the work that alone gave rise to evolutionism. Of course,

scholars today know better than that. Yet, few resist the temptation of turning to the Origin in order to support it or reject it in light of their own work. Apparently, Darwin fills the mythical role of a founding figure that must either be invoked or repudiated. The book is an invitation to move beyond what is currently expected of Darwin's magnum opus. Once the rhetorical varnish of Darwin's discourses is removed, one discovers a work of remarkably indecisive conclusions. The book comprises two main theses: (1) The Origin of Species never remotely achieved the theoretical unity to which it is often credited. Rather, Darwin was overwhelmed by a host of phenomena that could not fit into his narrow conceptual framework. (2) In the Origin of Species, Darwin failed at completing the full conversion to evolutionism. Carrying many ill-designed intellectual tools of the 17th and 18th centuries, Darwin merely promoted a special brand of evolutionism, one that prevented him from taking the decisive steps toward an open

and modern evolutionism. It makes an interesting read for biologists, historians and philosophers alike.
