Presents a collection of illustrated photographs and narratives that describes the U.S. combat aircraft of World War Two written by the former aviators who flew those missions. A vital resource for pilots, instructors, and students, from the most trusted source of aeronautic information. Laugh-out-loud and fully illustrated Ninja Kidis the start of a

brand new series from bestselling comedian Anh Do! Nelson is a ninja. He is not the coolest. Or the bravest. But he is the worlds nerdiest ninja! And now he has to stop an animal rampage and machines going crazy all over town! For that, he will need his new jetpack... and some serious ninja skills! How will Nelson learn to fly when he is scared of heights?! The Boeing B-17 Flying Fortress is one of the most iconic aircraft in aviation history. Through a broad range of photos gathered from around the world, this book--the second of two volumes--chronicles the design, development, and wartime use of the late models of the Flying Fortress, from the first truly combat-capable model, the B-17E, to the lifesaving B-17H. These B-17 versions featured the so-called "large" tail and were famously used in the devastating strategic-bombing campaign against Germany. As a special feature, detailed coverage of the famed "Memphis Belle" is included. The story of these iconic WWII aircraft is told through carefully researched photos, many of which have never before been published and are reproduced in remarkable clarity. Large, clear photos, coupled with descriptive and informative captions, unlock the secrets of this aircraft. 'Plane Essentials' is a series of concise aviation guides, which will profile many of the famous military and civil aircraft from the 20th century. The books combine the illustrations of technical artist John Batchelor with the text of aviation historian Malcolm V. Lowe. Lockheed's F-104G, a brand-new sleek jet design of the early 1950s, was a dream bird with a flying performance well beyond imagination. Despite its widow maker reputation in Germany during the early years of operation, the F-104 gained cult status and pilots became addicted to flying it. In his book, Rolf Stünkel takes us back to his training days and cold-war flights over the Baltic sea and along the East German border - a gripping, thought-provoking journey through time, not without a self-critical look at the past and present. Riveting, first-person accounts that put the reader in the cockpit. Dozens of photographs of the planes and the pilots that flew and fought in the skies from Tokyo to Berlin. Find out what it was like to fly some of the all-time classic aircraft of World War II, including the P-51 Mustang, B-17 Flying Fortress, P-47 Thunderbolt, P-38 Lightning, P-40 Kittyhawk, and many more! Twenty Five Ways to

Fly Better is packed with the latest techniques and thinking from some of the world's best pilots and instructors. With former Paragliding World Champion Bruce Goldsmith at the helm, the book draws on advice and knowledge from across the world of free flight. Volume 2, this one covers advanced XC techniques, from flying convergence, using speed-to-fly theory and becoming an advanced pilot. Volume 1 covers the basics of flying XC in both mountains and flatlands. From how to thermal to understanding and navigating airspace. Taken together, the two volumes cover everything in the print book 50 Ways to Fly Better. For this ebook, Volume 2, we've also added a few bonus chapters - if you've always wanted to look inside the mind of Chrigel Maurer, now you can. In a provocative and sometimes controversial style, this guide starts where standard-issue flight training manuals leave off. The Thinking Pilot guides you deeply into topics that weren't taught in flight training - everything from how to really do a preflight, through keeping your passengers happy, scud running, precautionary landings, and how to survive a crash. It includes a detailed introduction to flying floats, skis, aerobatics, and classic airplanes; probes some of aviation's dirty little secrets, explodes myths, and presents the best, most succinct guide to flying tailwheel airplanes ever written. Rick Durden was once described

as aviation's Renaissance Man. He is an Airline Transport-rated pilot with experience in some 200 types of airplanes, a practicing aviation attorney who has been involved in hundreds of aircraft accident cases, writer, aviation magazine editor, safety counselor, flight instructor, volunteer pilot in remote areas of the U.S. and Central America, and has been the executive director of a nonprofit conservation organization making use of aircraft and volunteer pilots throughout much of North America.
