Zohar •Thomas Berry Having spent several years listening to, and then writing about, the regrets of dying people, Bronnie Ware understands the importance of acknowledging death and finding the courage to live a happy and authentic life in the meantime. In this tender yet influential collection, Bronnie Ware shares 52 inspiring stories, woven among observations from her daily life, strengthening you with the values needed for regret-free living. You can read one story a week or read them all right through. Either way, Bronnie's ability to open your eyes to new perspectives

will also open your heart to new strengths and dreams. Your Year for Change is a gentle and powerful book that will leave you determined to embrace your life, forgive your past, honor your heart, and create a regret-free future of happiness and wonder. Arguing that humans possess a spiritual intelligence, the author offers an inspiring treatment of the subject, using new breakthroughs in neuroscience and philosophy to unlock the secrets of this innate ability. Original. Electronic Inspection Copy available for instructors here Recognizing and responding to change is the

oxygen of life for an organization, and leadership is fundamentally about focusing organizations on these new realities. Leadership and Change Management provides the reader with a practical, real-world understanding of several dimensions of leadership that are usually neglected in management textbooks, such as the nature of new realities and how managers can improve their insight into them, and how leaders can identify and overcome resistance to change. Drawing on a wide range of insightful, global real-life case studies to capture

the imagination, the topics covered include critical systems thinking, philosophies of leadership, group dynamics, authority, ethics, personal character and the psychology of leadership. This comprehensive text will be of interest to anyone looking for a more thoughtful engagement with the key issues in leadership and change management. Is there any real evidence that the ability to see into the future really exists? From the ancient Greeks consulting the Delphic Oracle, through the predictions of Nostradamus, to modern day "foreknowledge" of the sinking of the

Titanic, the author recounts and describes the evidence for precognition. As founder of the person-centred approach, Carl Rogers (1902-1987) is arguably the most influential psychologist and psychotherapist of the 20th century. This book provides unique insights into his life and a clear explanation of his major theoretical ideas. This Third Edition is co-authored by Brian Thorne and Pete Sanders, leading person-centred practitioners and bestselling authors. Pete Sanders contributes a new chapter on "The Ongoing Influence of Carl Rogers", covering topics such as research,

the emerging tribes in person-centred tradition, and its interaction with the medical profession. Brian Thorne draws on his experience of having known and worked with Rogers to beautifully describe the way in which Rogers worked with clients and from that, to draw out the practical implications of what is, in effect, a functional philosophy of human growth and relationships. In the twenty years since the first edition of Carl Rogers appeared, the book has continued to provide an accessible introduction for all practitioners and students of the person-centred approach. Examines

the new concept of "spiritual intelligence," which we use to develop our capacity for meaning, vision and value, and explains how to apply it in one's life. For a physicist, all the world is information. The Universe and its workings are the ebb and flow of information. We are all transient patterns of information, passing on the recipe for our basic forms to future generations using a four-letter digital code called DNA. In this engaging and mind-stretching account, Vlatko Vedral considers some of the deepest questions about the Universe and considers the implications of

interpreting it in terms of information. He explains the nature of information, the idea of entropy, and the roots of this thinking in thermodynamics. He describes the bizarre effects of quantum behaviour — effects such as 'entanglement', which Einstein called 'spooky action at a distance', and explores cutting edge work on harnessing quantum effects in hyperfast quantum computers, and how recent evidence suggests that the weirdness of the quantum world, once thought limited to the tiniest scales, may reach into the macro world. Vedral finishes by

considering the answer to the ultimate question: where did all of the information in the Universe come from? The answers he considers are exhilarating, drawing upon the work of distinguished physicist John Wheeler. The ideas challenge our concept of the nature of particles, of time, of determinism, and of reality itself. This edition includes a new foreword from the author, reflecting on changes in the world of quantum information since first publication. Oxford Landmark Science books are 'must-read' classics of modern science writing which have crystallized big

ideas, and shaped the way we think. Erwin Schrödinger was a brilliant and charming Austrian, a great scientist, and a man with a passionate interest in people and ideas. In this, the first comprehensive biography of Schrödinger, Walter Moore draws upon recollections of Schrödinger's friends, family and colleagues, and on contemporary records, letters and diaries. Schrödinger's life is portrayed against the backdrop of Europe at a time of change and unrest. His best known scientific work was the discovery of wave mechanics, for which he was awarded the Nobel prize in 1933.

Schrödinger led a very intense life, both in his scientific research and in his personal life. Walter Moore has written a highly readable biography of this fascinating and complex man, which will appeal not only to scientists but to anyone interested in the history of our times, and in the life and thought of one of the great men of twentieth-century science. An exploration of the meaning and identity of the human person in light of a renewed theology of creation, the ongoing discoveries of evolution and natural sciences, and newly appropriated resources in the theological

tradition. The authors of SQ: Connecting with Our Spiritual Intelligence urges readers to look beyond greed to see "profit" as a resource that should be shared by a community, thereby redefining "capital" in a capitalistic society. In their new book Danah Zohar and Ian Marshall envisage two scenarios. The first is business as we know it today - all short-term interest, short-term gain, isolationist thinking, with the material bottom line as king. The second envisages a business culture driven by fundamental values and a deep sense of purpose in which wealth is

accumulated to generate a decent profit while acting to raise the common good. The emphasis is on 'stake-holder value', where stakeholders include the human race, present and future, and the planet itself. These are the values of Spiritual Capital. The crucial question, which Zohar and Marshall address, is: How we can move from one scenario to the other? They show how we need to consider three types of capital to make the leap. Rational Intelligence (IQ) and Emotional Intelligence (EQ) are needed to diagnose the current state, and then the twelve qualities of

Spiritual Intelligence (SQ) can be used to bring about the final transformation. The ultimate goal is sustainable capitalism within a framework of a more meaningful working life. Quantum theorist Erwin Schrödinger invented his now-famous cat to illustrate the apparently impossible conundrums associated with quantum physics. The cat lives in an opaque box with a fiendish device that randomly feeds it either food, allowing it to live, or poison, which kills it. But in the quantum world, all possibilities coexist and have a reality of their own, and

they ensure that the cat is both alive and dead, simultaneously. Who's Afraid of Schrödinger's Cat? is a clear, concise explanation of the new sciences of quantum mechanics, chaos and complexity theory, relativity, new theories of mind, and the new cosmology. It studies worlds beyond the realm of common sense, and the new kinds of thinking that we need to understand ourselves, our minds, and our human place in the larger scheme of things. Combining physics, philosophy and psychology, this book offers a revolutionary theory of the origins and nature of consciousness in

terms of the new physics, pointing the way towards a new vision of the human self and its relationships, hence a new "quantum psychology" and a new "quantum morality". Written in an accessible style that makes quantum physics comprehensible, this book aims to interest anyone interested in the dynamics of the human personality and its dialogue with the physical world.;The author has also written "Through the Time Barrier: A Study of Precognition and Modern Physics". In The Quantum Society authors Danah Zohar and Ian Marshall offer a compelling vision for transforming society using the

insights of quantum physics to illuminate their ideas. Diversity, they suggest, is the creative evolutionary force, and the more diverse the society, the greater the opportunity for transformation and growth. Their theory of cosmic and social evolution allows us to discover the meaning and purpose of society through an appreciation and understanding of pluralistic thinking. The result is an all-embracing social model that celebrates the dynamic unity that is possible when we work together to orchestrate and articulate our interdependence. The quantum

society is flexible, evolving, and ambiguous. In short, it reflects the idea of society as a living system. The authors use the language of physics to provide the images and metaphors appropriate for understanding the principles that inform this system, bringing into focus our harmonious place within the natural world. A fascinating look at author J. W. Dunne's controversial model of multidimensional time, based on precognitive dreams. The proposed concept accounted for insights into higher consciousness and many of life's mysteries. 'Warm, generous and

Nicholls, author of *One Day When Luce Brett became incontinent at the age of 30, after the birth of her first son, she felt her life had ended. She also felt scared, upset, embarrassed, dirty and shocked. How the hell had she ended up there, the youngest woman in the waiting room at the incontinence clinic? PMSL is her story. A heartfelt, moving and deeply personal account of the decade that followed, told with incredible honesty and wit. Luce has been at the sharp end of a medical issue that affects 1 in 3 women but that remains shrouded in taboo and social stigma. It's sincere, raw and funny - but crucially it is the first memoir to look*

at incontinence, smashing the stigma and looking at what anyone affected can do to navigate their way through the wet-knickered wilderness. As featured in Hello!, OM Yoga & Lifestyle, Natural Health, Healthy Living, Yoga magazine and Women's Fitness Breathing is at the core of everything we do. Breath is life. In this inspiring and accessible book, yoga teacher and award-winning documentary filmmaker Yolanda Barker shows us the importance of better breathing, and provides a seven-day programme of practical exercises for readers to follow. Drawing on

her own experiences with anxiety and depression, the breathing practices she shares can help to ease symptoms of stress, enable us to sleep better, and calm us down during difficult situations. Grounding the information in science and her observations as a long-term yoga teacher, she also explains how these exercises work, and shines a light on the physiology of stress, and its effect on the body, mind and emotions. The book features inspiring and instructional illustrations. Supported with science and enriched with sensitivity, understanding and

personal experience, The Breathing Revolution is an empowering guide to breathing practices that can be truly life-changing. Beyond your IQ (mental intelligence) and EQ (emotional intelligence), author Dr. Mark Brewer examines SQ (spiritual intelligence), and shows you how to increase your ability to hear and respond to God. This book addresses the notion of time and temporality and its various conceptualizations in the theories of the new physics, utilized as a thematic and formal framework in the British novel of the twenty-first century. As the

Newtonian conception of reality does not provide a reliable framework within which to situate human experience and generate meaning, fiction writers have recognized quantum mechanics as a potent source from which to draw in search of new metaphors. The quantum has become a part of the understanding of reality, and its concepts and assumptions have been absorbed into the textual structure and content of literary fiction. *Shapes of Time in British Twenty-First Century Quantum Fiction* examines human temporality as mediated by the timeshapes

imagined within the context of the new physics, and explores the philosophical implications for human temporality and identity of situating an individual within the realm of physical time. Its chapters deal with various concepts of the new physics connected with temporality, and their appropriation in a selected novel: parallel universes in Andrew Crumey's *Sputnik Caledonia* (2008), eternal recurrence and Poincaré's theorem in David Mitchell's *Cloud Atlas* (2004), chaos theory in Samantha Harvey's *The Wilderness* (2009), and the end of time in Scarlett Thomas's *The End*

of *Mr. Y* (2006). Each of them corresponds to a different conceptual shape of time: tree, concertina, spiral and snapshot, respectively, which is enacted on the formal level. Analyzing the new time constructs in a narrative, this book thus uncovers passages between scientific and humanistic standpoints, and reveals quantum fiction to be an effective tool for visualizing the subjective non-homogenous experience of private time. *Spiritual Intelligence* refers to the intuitive knowledge of the self, others, situations and techniques to achieve the desired

objectives. Hence it can be called the soul of all intelligences. Spiritual Intelligence enhances our power to inspire others by transforming their souls in such a way that their desires and aspirations are aligned in a single direction. Soul is beyond all reason and intellect. It is, in fact, the source of mind and intellect. One who knows his soul knows the universe, since soul is nothing but the microcosm of the universe. This book explains this body-soul continuum and suggests practical steps to evolve through the body-senses-mind-intellect to reach our soul. Welcome

to this new path of spiritual evolution. Often referred to as "the thinking person's self-help book," I am Keats is unlike anything you've ever read. Both a psychologically attuned philosophy and an impassioned manifesto on life, this mind-opening book will inspire you to liberate your spirit and seize the potential of your life. "Indescribable." - Seth Godin, author of What to Do When It's Your Turn "We're confined in mental prisons of our own creation," declares Tom Asacker as he begins his extraordinary book. He goes on to assert that the locks to our cells are the delusional

stories we tell ourselves. "We make them up-or others make them up for us-and eventually we come to believe them. We call those inherited and learned accounts of life, 'reality.'" And it's that reality that keeps so many of us from living an authentic life and doing what we truly long to do. In this simple, personal and profound book, Asacker rejects the everyday, traditional ideas of reality and the "quick-fix" formulas for success and happiness. Instead, he pulls back the curtain to reveal the powerful cultural illusions that control your mind and heart, and shows you how to find faith in your

true self and return to your own common sense. At the beginning of the twentieth century psychologists discovered ways and means to measure intelligence that developed into an obsession with IQ. In the mid 1990's, Daniel Goleman popularised research into emotional intelligence, EQ, pointing out that EQ is a basic requirement for the appropriate use of IQ. In this century, there is enough collective evidence from psychology, neurology, anthropology and cognitive science to show us that there is a third 'Q', 'SQ' or Spiritual Intelligence. SQ is uniquely human

and, the authors argue, the most fundamental intelligence. SQ is what we use to develop our longing and capacity for meaning, vision and value. It allows us to dream and to strive. It underlies the things we believe in, and the role our beliefs and values play in the actions that we take and the way we shape our lives. Revised edition of the best-selling memoir that has been read by over a million people worldwide with translations in 29 languages. After too many years of unfulfilling work, Bronnie Ware began searching for a job with heart. Despite having no formal qualifications or

previous experience in the field, she found herself working in palliative care. During the time she spent tending to those who were dying, Bronnie's life was transformed. Later, she wrote an Internet blog post, outlining the most common regrets that the people she had cared for had expressed. The post gained so much momentum that it was viewed by more than three million readers worldwide in its first year. At the request of many, Bronnie subsequently wrote a book, *The Top Five Regrets of the Dying*, to share her story. Bronnie has had a colourful and diverse life. By applying the lessons of those

nearing their death to her own life, she developed an understanding that it is possible for everyone, if we make the right choices, to die with peace of mind. In this revised edition of the best-selling memoir that has been read by over a million people worldwide, with translations in 29 languages, Bronnie expresses how significant these regrets are and how we can positively address these issues while we still have the time. The Top Five Regrets of the Dying gives hope for a better world. It is a courageous, life-changing book that will leave you feeling more compassionate and inspired to live the

life you are truly here to live. In this new book, Frederick Chavalit Tsao and Chris Laszlo argue that current approaches to leadership fail to produce positive outcomes for either businesses or the communities they serve. Employee disengagement and customer fickleness remain high, resulting in a lack of creativity and collaboration at all levels of entrepreneurial activity. Investor demand for Environmental, Social, and Governance (ESG) continues to be poorly integrated into profit strategies. Drawing on extensive research, this book shows how changing a person's

consciousness is the most powerful lever for unlocking his or her leadership potential to create wealth and serve humankind. A wide range of practices of connectedness provide the keys. The journey to higher consciousness changes people at a deep intuitive level, combining embodied experience with analytic-cognitive skill development. Tsao and Laszlo show how leaders who pursue this journey are more likely to flourish with significant benefits to both business and society. These include greater creativity and collaboration along with an increased

capability to inspire people and produce lasting change. Readers will come away with a deep understanding of quantum leadership and the day-to-day practices that can help them achieve greater effectiveness and wellbeing at work. Stop! Don't Go There! Mistakes Made by Top Leaders, provides a framework that should permeate strategies to balance the imperatives of the present with the high pressure demands of the future. The case in point is to focus on the organisation's core competencies rather than merely toeing the line of competitors. It, thus, offers a rich collection of

hindsight vision from an elite and diverse group of leaders, juxtaposed with how that translates into actions in the current scenario. Based on in-depth interviews with more than 30 high profile leaders, the book provides valuable insights generated through the mistakes made by these luminaries. Be it related to balancing today's exigencies with tomorrow's challenges, articulating a road map, identifying values, behaviours and metrics for sustenance or aligning with culture...leaders have candidly admitted to their shortcomings and failings. What's intriguing is that

some of them, overwhelmed with the quality of interaction, confessed to outlining their mistakes, on deep reflection, right during their interview. The valuable lessons learnt from these cross section of leaders spanning manufacturing, IT, services, education, politics, law, the fine arts, hospitality, and SMEs, represents a unique and important perspective to guide organisations towards a long-term winning position. Letting go is what enables you to move forward. Many leaders have learnt to unlearn values and traditional mindsets in order to scale

heights. This book, a one-of-its-kind compendium of corporate mistakes, structured around values, mistakes and learning through first person interviews, is a must-read for leaders and managers in today's fast changing, hypercompetitive world, where unquestioned answers are being probed. In demonstrating a high degree of learnability, the book is a true primer for a non-linear business world riddled with discontinuities and disruptions. Drawing inspiration from quantum physics, innovative management thinker Danah Zohar offers a powerful new

model for business thinking and practice. "Quantum leaders," she says, like the systems they have to manage, are poised at "the edge of chaos." They thrive on the potential latent in uncertainty and are adept at unleashing the creativity of self-organization. More important, they are vision- and value-led; they adapt quickly, are unafraid to play with the boundaries and reinvent the rules, and celebrate diversity. Zohar points out that the existing, business-as-usual paradigm owes a great deal to the outdated thinking, assumptions, and values of Newtonian science, which gave rise to

the Industrial Revolution. Newtonian thinking assumes that corporations and markets are like machines-- predictable, stable, and controllable; they are best managed in a way that eliminates risk and assures equilibrium. Unfortunately, as the global financial collapse of 2008 demonstrated, this way of thinking is as obsolete as the steam engine. Further developing ideas she introduced in her acclaimed *Rewiring the Corporate Brain and Spiritual Capital*, Zohar has written an inspirational book that will motivate leaders to tap the full potential of their employees,

their businesses, and the customers they serve. Describes the brain as a three-part system consisting of a mental, spiritual, and emotional section and shows how "rewiring" the thinking behind thinking can allow one's brain to function and operate more fully. 25,000 first printing. \$50,000 ad/promo. Tour. IP. A unique contribution to the understanding of social science, showing the implications of quantum physics for the nature of human society. With a decline in traditional religious belief, interest in spirituality has grown in Western cultures. The notion of spirituality

expresses the fact that people are driven by goals that concern more than material satisfaction. Here, the author explores the historical foundations of spirituality and thinks about how it transforms lives. This open access book offers a new management meta-theory to replace Taylorism. It presents a new paradigm in management thinking and a new, practical organizational model for implementing it in our personal and working lives, in our companies, in our communities and nations, and in a sustainable global order. It will offer an understanding of why and how

"thinking-as-usual" is failing both business and political leaders in these new times, and it will advocate new thinking and new management practices that are so radically new that they turn everything we have taken for granted inside out and upside down. This new management model is called "Quantum Management Theory" because it is rooted in the new paradigm bequeathed to us by quantum physics and its younger sibling, complexity science. Danah Zohar is a physicist, philosopher, and management thought leader. She is a Visiting Professor at Tsinghua

University's School of Economics and Management and a Visiting Professor at the China Academy of Art The Zohar is a mystical commentary on the Torah that is the basis for Kabbalah. This is a difficult book to translate. Matt, who has taught Jewish mysticism at Stanford University and the Hebrew University of Jerusalem, is working his way through the book, giving a comprehensive annotation that offers background and explanations of the text, both his own and those of other scholars. In this major new study in the sociology of scientific knowledge, social

theorist Mohammad H. Tamdgidi reports having unriddled the so-called 'quantum enigma.' This book opens the lid of the Schrödinger's Cat box of the 'quantum enigma' after decades and finds something both odd and familiar: Not only the cat is both alive and dead, it has morphed into an elephant in the room in whose interpretation Einstein, Bohr, Bohm, and others were each both right and wrong because the enigma has acquired both localized and spread-out features whose unriddling requires both physics and sociology amid both transdisciplinary and transcultural contexts. The book

offers, in a transdisciplinary and transcultural sociology of self-knowledge framework, a relativistic interpretation to advance a liberating quantum sociology. Deeper methodological grounding to further advance the sociological imagination requires investigating whether and how relativistic and quantum scientific revolutions can induce a liberating reinvention of sociology in favor of creative research and a just global society. This, however, necessarily leads us to confront an elephant in the room, the 'quantum enigma.' In

Unriddling the Quantum Enigma, the first volume of the series commonly titled Liberating Sociology: From Newtonian toward Quantum Imaginations, sociologist Mohammad H. Tamdgidi argues that unriddling the 'quantum enigma' depends on whether and how we succeed in dehabituating ourselves in favor of unified relativistic and quantum visions from the historically and ideologically inherited, classical Newtonian modes of imagining reality that have subconsciously persisted in the ways we have gone about posing and interpreting (or not)

the enigma itself for more than a century. Once this veil is lifted and the enigma unriddled, he argues, it becomes possible to reinterpret the relativistic and quantum ways of imagining reality (including social reality) in terms of a unified, nonreductive, creative dialectic of part and whole that fosters quantum sociological imaginations, methods, theories, and practices favoring liberating and just social outcomes. The essays in this volume develop a set of relativistic interpretive solutions to the quantum enigma. Following a survey of relevant studies, and an introduction

to the transdisciplinary and transcultural sociology of self-knowledge framing the study, overviews of Newtonianism, relativity and quantum scientific revolutions, the quantum enigma, and its main interpretations to date are offered. They are followed by a study of the notion of the "wave-particle duality of light" and the various experiments associated with the quantum enigma in order to arrive at a relativistic interpretation of the enigma, one that is shown to be capable of critically cohering other offered interpretations. The book concludes

with a heuristic presentation of the ontology, epistemology, and methodology of what Tamdgidi calls the creative dialectics of reality. The volume essays involve critical, comparative/integrative reflections on the relevant works of founding and contemporary scientists and scholars in the field. This study is the first in the monograph series "Tayyebeh Series in East-West Research and Translation" of Human Architecture: Journal of the Sociology of Self-Knowledge (XIII, 2020), published by OKCIR: Omar Khayyam Center for Integrative Research in Utopia, Mysticism, and

Science (Utopystics). OKCIR is dedicated to exploring, in a simultaneously world-historical and self-reflective framework, the human search for a just global society. It aims to develop new conceptual (methodological, theoretical, historical), practical, pedagogical, inspirational and disseminative structures of knowledge whereby the individual can radically understand and determine how world-history and her/his selves constitute one another. Reviews "Mohammad H. Tamdgidi's Liberating Sociology: From Newtonian Toward

Quantum Imaginations, Volume 1, Unriddling the Quantum Enigma hits the proverbial nail on the head of an ongoing problem not only in sociology but also much social science—namely, many practitioners' allegiance, consciously or otherwise, to persisting conceptions of 'science' that get in the way of scientific and other forms of theoretical advancement. Newtonianism has achieved the status of an idol and its methodology a fetish, the consequence of which is an ongoing failure to think through important problems of uncertainty,

indeterminacy, multivariation, multidisciplinary, and false dilemmas of individual agency versus structure, among many others. Tamdgidi has done great service to social thought by bringing to the fore this problem of disciplinary decadence and offering, in effect, a call for its teleological suspension—thinking beyond disciplinary—through drawing upon and communicating with the resources of quantum theory not as a fetish but instead as an opening for other possibilities of social, including human, understanding. The implications are far-reaching as they

offer, as the main title attests, liberating sociology from persistent epistemic shackles and thus many disciplines and fields connected to things ‘social.’ This is exciting work. A triumph! The reader is left with enthusiasm for the second volume and theorists of many kinds with proverbial work to be done.” — Professor Lewis R. Gordon, Honorary President of the Global Center for Advanced Studies and author of *Disciplinary Decadence: Living Thought in Trying Times* (Routledge/Paradigm, 2006), and *Freedom, Justice, and Decolonization* (Routledge, forthcoming 2020)

"Social sciences are still using metatheoretical models of science based on 19th century newtonian concepts of "time and space". Mohammad H. Tamdgidi has produced a 'tour de force' in social theory leaving behind the old newtonian worldview that still informs the social sciences towards a 21st century non-dualistic, non-reductionist, transcultural, transdisciplinary, post-Einsteinian quantum concept of TimeSpace. Tamdgidi goes beyond previous efforts done by titans of social theory such as Immanuel Wallerstein and Kyriakos

Kontopoulos. This book is a quantum leap in the social sciences at large. Tamdgidi decolonizes the social sciences away from its Eurocentric colonial foundations bringing it closer not only to contemporary natural sciences but also to its convergence with the old Eastern philosophical and mystical worldviews. This book is a masterpiece in social theory for a 21st century decolonial social science. A must read!" — Professor Ramon Grosfoguel, University of California at Berkeley
"Tamdgidi's Liberating Sociology succeeds

in adding physical structures to the breadth of the world-changing vision of C. Wright Mills, the man who mentored me at Columbia. Relativity theory and quantum mechanics can help us to understand the human universe no less than the physical universe. Just as my *Creating Life Before Death* challenges bureaucracy's conformist orientation, so does *Liberating Sociology* "liberate the infinite possibilities inherent in us." Given our isolation in the Coronavirus era, we have time to follow Tamdgidi in his journey into the depth of inner space, where few men have gone

before. It is there that we can gain emotional strength, just as Churchill, Roosevelt and Mandela empowered themselves. That personal development was needed to address not only their own personal problems, but also the mammoth problems of their societies. We must learn to do the same." — Bernard Phillips, Emeritus Sociology Professor, Boston University Using his own story, the international bestselling author shows readers how 3 changes in mindset can help them shape their future. Synchronicity is an inspirational guide to developing the most essential

leadership capacity for our time: how we can collectively shape our future. Through the telling of his life story, Jaworski posits that a real leader sets the stage on which “predictable miracles,” seemingly synchronistic in nature, can—and do—occur. He shows that this capacity has more to do with our being—our total orientation of character and consciousness—than with what we do. Leadership, he explains, is about creating—day by day—a domain in which human beings continually deepen their understanding of reality and are able to participate in shaping the future.

He describes three basic shifts of mind required if we are to create and discover an unfolding future—shifts in how we see the world, how we understand relationships, and how we make commitments—and offers a new definition of leadership that applies to all types of leaders. “A deeply personal and moving narrative that opens up new vistas on compassion, commitment, and connectedness—and hence on leadership.”
—James MacGregor Burns, Pulitzer Prize-winning presidential biographer and Woodrow Wilson Professor of

Government, Emeritus, Williams College “An insightful, profound, and readable contribution to understanding the personal side of leadership.”
—Rosabeth Moss Kanter, Ernest L. Arbuckle Professor of Business Administration, Harvard Business School, and author of *SuperCorp* “An unusually thoughtful exploration of the “inner” aspects of leadership, particularly in the business arena.... Eschewing easy answers and ten-point plans to success, presenting the insights he has garnered from forward-looking thinkers including David Bohm and

Rupert Sheldrake, Jaworski offers a searching and wise brief that deserves to be read in boardrooms everywhere."
