This how-to book provides a step-by-step guide to the constituent practices and processes needed to produce a sustainability report, structured around the Global Reporting Initiative's Sustainability Reporting Process. It is written by the first GRI Certified training providers in the UK, who also produced the first GRI Certified Training course to be accredited by the Institute of Environmental Management & Assessment (IEMA). This book will show you: (1) how to produce a business case, develop action plans, secure leadership over process and people, and how to generate cross functional buy in, (2) how to do stakeholder engagement, materiality and assurance, and how to collect quality data and (3) how to plan and prepare to report, how to finalize and disseminate a report, and how to apply and manage the GRI Materiality Matters Check. The authors also provide invaluable tips on how to write a report, and how to position it on media platforms for both dissemination and feedback. In short, this book is a masterclass on precisely the things that individuals and organizations need and want to know to set up or improve the quality of their reporting processes, and to write effective reports. # This book will also enable stakeholders with a professional, personal or academic interest in reporting to learn how to evaluate a report - an essential skill for report writers too. The standard scientific methodology in linguistics is empirical testing of falsifiable hypotheses. As such the process of hypothesis generation is central, and involves formulation of a research question about a domain of interest and statement of a hypothesis relative to it. In corpus linguistics the domain is text, and generation involves abstraction of data from text, data analysis, and formulation of a hypothesis based on inference from the results. Traditionally this process has been paper-based, but the advent of electronic text has increasingly rendered it obsolete both because the size of digital corpora is now at or beyond the limit of what can efficiently be used in the traditional way, and because the complexity of data abstracted from them can be impenetrable to understanding. Linguists are increasingly turning to mathematical and statistical computational methods for help, and cluster analysis is such a method. It is used across the sciences for hypothesis generation by identification of structure in data which are too large or complex, or both, to be interpretable by direct inspection. This book aims to show how cluster analysis can be used for hypothesis generation in corpus linguistics, thereby contributing to a quantitative empirical methodology for the discipline. A number of widely used contemporary processors have instruction-set extensions for improved performance in multi-media applications. The aim is to allow operations to proceed on multiple pixels each clock cycle. Such instruction-sets have been incorporated both in specialist DSP chips such as the Texas C62xx (Texas Instruments, 1998) and in general purpose CPU chips like the Intel IA32 (Intel, 2000) or the AMD K6 (Advanced Micro Devices, 1999). These instruction-set extensions are typically based on the Single Instruc

tion-stream Multiple Data-stream (SIMD) model in which a single instruction causes the same mathematical operation to be carried out on several operands, or pairs of operands, at the same time. The level of parallelism supported ranges from two floating point operations, at a time on the AMD K6 architecture to 16 byte operations at a time on the Intel P4 architecture. Whereas processor architectures are moving towards greater levels of parallelism, the most widely used programming languages such as C, Java and Delphi are structured around a model of computation in which operations take place on a single value at a time. This was appropriate when processors worked this way, but has become an impediment to programmers seeking to make use of the performance offered by multi-media instruction -sets. The introduction of SIMD instruction sets (Peleg et al. Better Corporate Reporting outlines the latest frameworks for enhancing non-financial and sustainability reporting. It shows you how to integrate non-financial data into your reporting and overall strategy, creating long-term value, trust and transparency. It includes guides to: the International Integrated Reporting Council's new framework; the Global Reporting Initiative's G4 framework; and a detailed look at the concept at the heart of both of these new frameworks, materiality. It is the compilation of 3 bestselling sustainability guides on sustainability reporting. Understanding Integrated Reporting provides a practical and expert distillation of the new IR framework released by the International Integrated Reporting Council in December 2013. It explains what IR is and how to do it; how it links with other reporting frameworks and what it means in terms of thinking and processes. You'll also get a clear business case for IR and insights and best practice examples from leading integrated reporters. The Global Reporting Initiative (GRI) G4 Sustainability Reporting Framework was launched in May 2013. In Understanding G4, corporate reporting veteran Elaine Cohen presents an easy-to-follow review of everything any organization needs to know to decide whether to use the G4 Framework and if so, how. Materiality is the lynch-pin that can align your sustainability initiatives with your overall strategy. Making Sustainability Matter shows you how to identify your organization's most material sustainability issues, allocate resources to sustainability initiatives for optimal returns; connect your communications and reporting to materiality, and; clarify which issues are important to your stakeholders. Materiality is a core concept in both the GRI's new G4 framework the IIRC's new Integrated Reporting framework. LG has taken its inspiration from many sources to create the new G4 smartphone. It is ergonomically correct, with gentle contours that make it easy to use. The materials in the G4 give it a timeless look of beauty with functionality. To train your ear, one must learn to distinguish sounds. Acquiring Perfect Pitch requires in addition to remember pitches. In early childhood we collect the vast part of our relevant sound memory by imitating the sounds with our vocal cords. However, our brain doesn't stop there. At a later age we can still learn a new foreign language. Three new methods to acquire Absolute Pitch and Relative Pitch, supported by software feedback, are presented in this book. The first method, the Singing Funnel method, lets you acquire Absolute Pitch like a foreign language. The second method, the Octave Anchor Pitch method helps you to orientate yourself in the pitch realm. The last method, the Interval Overtone method, improves your interval hearing. Should you or your clients report using the new G4 sustainability reporting framework? What's the significance of the changes and how do they affect you? What is the right reporting level for your company? What should you do next...? Sustainability reporting is here to stay and expanding its influence. Since then thousands of reporters have been hoping for a short and definitive guide to this new reporting paradigm. This is it! In this expert guide to G4, Elaine Cohen presents an easy-to-follow review of everything any company needs to know in order to decide whether to use the G4 Framework and if so, how. If you want to know what G4 means for corporate reporters, whether they are first-timers, SMEs, experienced global companies or existing GRI reporters at any level, this book is for you. It will give you the answers you need to make decisions, in a user-friendly format, and help you deliver greater value to your own company or your client companies. This book explores the persistence of the governance gap with respect to the human rights-impacting conduct of transnational extractive corporations operating in zones of weak governance. The authors launch their account with a fascinating case study of Talisman Energy's experience in Sudan, informed by their own experience as members of the 1999 Canadian Assessment Mission to Sudan (Harker Mission). Drawing on new governance, reflexive law and responsive law theories, the authors assess legal and other non-binding governance mechanisms that have emerged since that time, including the UN Guiding Principles on Business and Human Rights. They conclude that such mechanisms are incapable of systematically preventing human rights violating behaviour by transnational corporations, or of assuring accountability of these actors or recompense for victims of such violations. The authors contend that home state regulation, while not a silver bullet, has a crucial role to play in regulating such conduct. They pick up where UN Special Representative John Ruggie's Guiding Principles on Business and Human Rights left off, and propose an innovative, robust and adaptable template for strengthening the regulatory framework of home states. Their model draws insights from the theoretical literature, leverages existing public, private, transnational, national, 'soft' and hard regulatory tools, and harnesses the specific strengths of state-based governance. This book will be of interest to academics, policy makers, students, civil society and business leaders. TuneCrack stands for: Crack the tuning problem - Learn to tune instruments precisely. The importance of tuning is often underestimated. However, tuning is a necessary step for every performance. TuneCrack has exercises to improve your listening skill and your pitch transfer skill. Your listening skill is trained with the Precision Listening Method. Your task is to solve ever more challenging questions: until a precision to the cent. Your transfer skill is trained with the Pitch Keeper Method. First, the

program introduces you to your personal Absolute Pitch Point. With appropriate exercises and feedback you learn how to take over a pitch and keep the sound in your mind for an ever-lengthier time period. Transferring a pitch and keeping it in your mind is an important step in understanding the musical center of a piece. Since humans can only express pitch by singing, the program listens to you and gives you feedback based on your singing: a colored pitch line shows, if you are too low, too high or on target. The program tracks your progress and lets you see the statistics in graphical form. Thus, your weak and strong points get visible. Eliminate weak points by training. Build upon and extend your strong points. With your strong points start building an absolute pitch repertoire. A user-friendly introduction to the powerful mental mapping tool of repertory grid technique. Written as a DIY guide, with a friendly expert sitting beside you, this book will teach you the technique of repertory grids step by step. Here you'll find all the information you need, alongside lots of worked examples and helpful exercises that you can use to check your understanding. The answers are in the back! If you want additional practice and resources a website that supports this book can be found at www.wiley.co.uk/easyguide Professor Devi Jankowicz is one of the leading authorities on occupational applications of personal construct theory and repertory grid technique. He has written this guide for psychology students and researchers; education students; personnel practitioners; as well as managers in the workplace. "This book's title may seem a contradiction in terms to readers who have seen the repertory grid as dauntingly complex. However, the book lives up to its title in being a very user-friendly introduction to the technique, written in a chatty style, and including numerous practical exercises, mostly not requiring use of computer software." - David Winter University of Hertfordshire and Barnet, Enfield and Haringey Mental Health NHS Trust This book considers, and offers solutions to, the problems faced by local communities and the environment with respect to global mining. The author explores the idea of grievance mechanisms in the home states of the major mining conglomerates. These grievance mechanisms should be functional, pragmatic and effective at resolving disputes between mining enterprises and impacted communities. The key to this provocative solution is twofold: the proposal harnesses the power of industry-sponsored dispute mechanisms to reduce the costs and other burdens on home state governments and judicial systems. Critically, civil society actors will be given a role as both advocates and mediators in order to achieve a fair result for those impacted abroad by extractive enterprises. Compelling, engaging and timely, this book presents an innovative approach for regulating the foreign conduct of the extractive sector.
